

MR studies in R

How to use genetics for identifying modifiable risk factors

Daniela Mariosa

Genetic Epidemiology group, IARC

Lyon, France

International Agency for Research on Cancer

The example: is Obesity a cause of Ovarian Cancer?

2-Sample Mendelian Randomization (2SMR)

1. GWAS results for *BMI* (instrument)
2. GWAS results for *Ovarian Cancer*

				R PACKAGES		
STEPS	2SMR	Meta-Analysis	Other			
Data Preparation						✓
Harmonisation	TwoSampleMR					
Estimation	TwoSampleMR	✓				
Visualization	TwoSampleMR	✓				✓

Conclusions on Mendelian randomization

Pros

- ▶ Easy to perform in R
- ▶ Genetic information is important
- ▶ Data availability

Cons

- ▶ Large sample sizes needed
- ▶ Assumptions!
