

Logging and Analyzing Events in Complex Shiny Apps

with **shinyEventLogger**

Kamil Wais

UseR! - Toulouse - 2019

1 / 32

Why to log?

2 / 32

Why to log?

- logging in development:
 - shows which events are firing (or not)
 - shows in what sequence events are firing
 - shows why events fired & within what context
 - helps with **debugging & development**
- logging in production:
 - shows how users use the app
 - helps to see usage patterns
 - helps with app **evaluation & optimization**

3 / 32

What do we need?

4 / 32

What do we need?

- logging tool **dedicated to** complex **shiny apps**
- ability to see most recent events in **real-time**
- quick & easy **access** to eventlogs
- **permanent storage** for eventlogs
- tools to **analyse** the eventlogs

lifecycle experimental

shinyEventLogger

R Package for Logging Events in Complex Shiny Apps

5 / 32

What type of events to log?

6 / 32

Logging generic events

```
library(shiny)
library(shinyEventLogger)
set_logging()
shinyApp(
  ui = fluidPage(log_init()),
  server = function(input, output) {
    set_logging_session()
    log_event("Event body", name = "Event name")
    log_event("Event without explicit name")
    x <- "123"
    log_event("Event", x)
  }
)
```

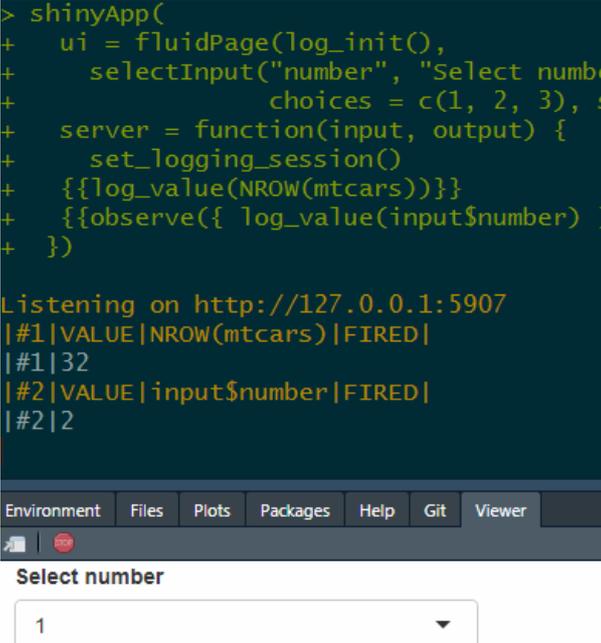

```
|#1|EVENT|Event name|FIRED|
|#1|Event body
|#2|EVENT|Event without explicit name|FIRED|
|#3|EVENT|Event 123|FIRED|
```

7 / 32

Logging values

```
set_logging()
shinyApp(
  ui = fluidPage(log_init(),
    selectInput("number",
      "Select number",
      choices = c(1, 2, 3),
      selected = 2)),
  server = function(input, output) {
    set_logging_session()
    log_value(NROW(mtcars))
    observe({
      log_value(input$number)
    })
  })
})
```

```
|#1|VALUE|NROW(mtcars)|FIRED|
|#1|32
|#2|VALUE|input$number|FIRED|
|#2|2
```

```
> shinyApp(
+   ui = fluidPage(log_init(),
+     selectInput("number", "Select number",
+       choices = c(1, 2, 3),
+       selected = 2)),
+   server = function(input, output) {
+     set_logging_session()
+     {{log_value(NROW(mtcars))}}
+     {{observe({ log_value(input$number) })}}
+   })
Listening on http://127.0.0.1:5907
|#1|VALUE|NROW(mtcars)|FIRED|
|#1|32
|#2|VALUE|input$number|FIRED|
|#2|2
```

8 / 32

Logging function outputs

```
set_logging()
shinyApp(
  ui = fluidPage(log_init()),
  server = function(input, output) {
    set_logging_session()
    log_output(head(mtcars, 2))
    log_output(str(mtcars[, 1:3]))
  })
```

```
|#1|OUTPUT|head(mtcars, 2)|FIRED|
|#1|          mpg cyl disp  hp drat   wt  qsec vs am gear carb
|#1|Mazda RX4      21   6  160 110   3.9 2.620 16.46  0  1   4   4
|#1|Mazda RX4 Wag  21   6  160 110   3.9 2.875 17.02  0  1   4   4
|#2|OUTPUT|str(mtcars[, 1:3])|FIRED|
|#2|'data.frame':   32 obs. of  3 variables:
|#2| $ mpg : num  21 21 22.8 21.4 18.7 18.1 14.3 24.4 22.8 19.2 ...
|#2| $ cyl : num  6 6 4 6 8 6 8 4 4 6 ...
|#2| $ disp: num  160 160 108 258 360 ...
```

9 / 32

Logging outcomes of unit tests

```
set_logging()
shinyApp(
  ui = fluidPage(log_init()),
  server = function(input, output) {
    set_logging_session()
    log_test(testthat::expect_true(TRUE))
    log_test(testthat::expect_true(FALSE))
  })
```

```
|#1|TEST|testthat::expect_true(TRUE)|SUCCESS|
|#2|TEST|testthat::expect_true(FALSE)|ERROR|
|#2|Error: FALSE isn't true.
```

10 / 32

Logging traditional diagnostic messages

```
set_logging()
shinyApp(
  ui = fluidPage(log_init()),
  server = function(input, output) {
    set_logging_session()
    log_message("Example of a message")
    log_warning("Example of a warning")
    log_error("Example of an error")
  })
```

```
|#1|MESSAGE|Example of a message|FIRED|
Example of a message
|#2|WARNING|Example of a warning|FIRED|
Warning in log_warning("Example of a warning") : Example of a warning
|#3|ERROR|Example of an error|FIRED|
Warning: Error in log_error: Example of an error
52: stop
```

11 / 32

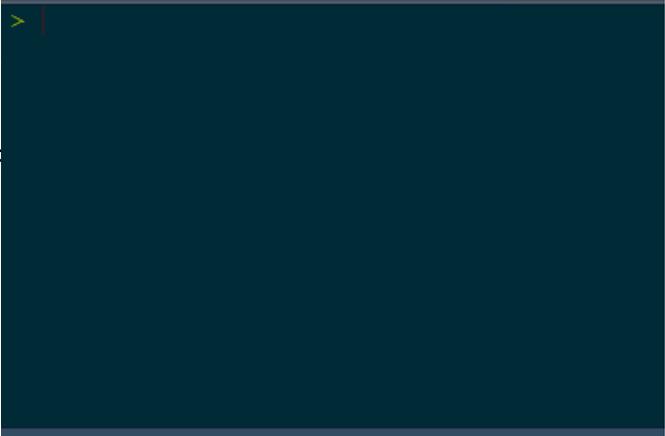

Timing events

12 / 32

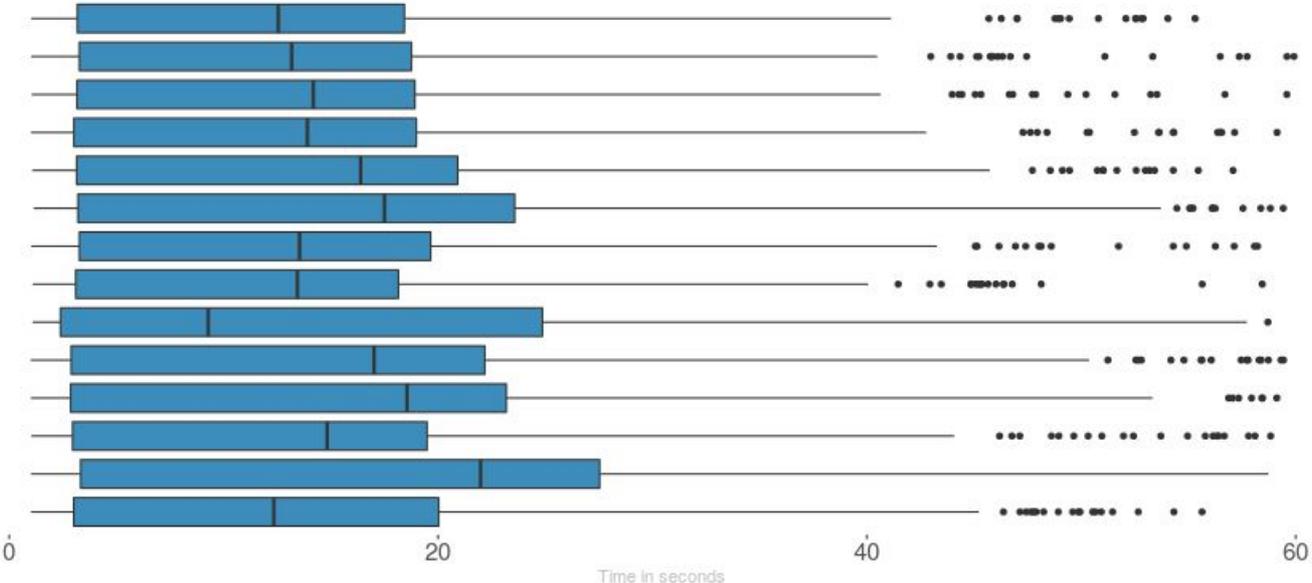

Logging & timing events

```
shinyApp(
  ui = shiny::fluidPage(log_init()),
  server = function(input, output) {
    set_logging_session()
    log_started("Event 1")
    log_event("Sleeping for 3 secs...")
    Sys.sleep(3)
    log_done("Event 1")
  })
```

```
|#1|EVENT|Event 1|STARTED|
|#2|EVENT|Sleeping for 3 secs...|FINISHED|
|#1|EVENT|Event 1|DONE|
|#1|PARAMS|list(secs = 3)
```

Logging & timing in parallel R processes

Logging the context of the events

15 / 32

Logging events with parameters

```
set_logging(app = "demo")
shinyApp(
  ui = fluidPage(log_init(),
    selectInput("number", "Select number", choices = c(1, 2))
  server = function(input, output) {
    set_logging_session(unique_id = runif(1))
    observe({
      log_event("number changed",
        params = list(number = input$number))
    })
  })
})
```

```
|#1|EVENT|number changed|FIRED|
|#1|PARAMS|list(number = "2", unique_id = 0.104973568115383, app = "d
```

16 / 32

Logging events with parameters

```
+ log_init(),  
+ selectInput("number", "Select number", choices = c(1, 2, 3), selected = 2)),  
+ server = function(input, output) {  
+   {{set_logging_session(unique_id = runif(1))}}  
+   observe({  
+     {{log_event("number changed", params = list(number = input$number))}}  
+   })  
+ }
```

Listening on http://127.0.0.1:7185

```
|#1|EVENT|number changed|FIRED|
```

```
|#1|PARAMS|list(number = "2", unique_id = 0.54154440946877, app = "demo")
```

How to analyze the eventlog?

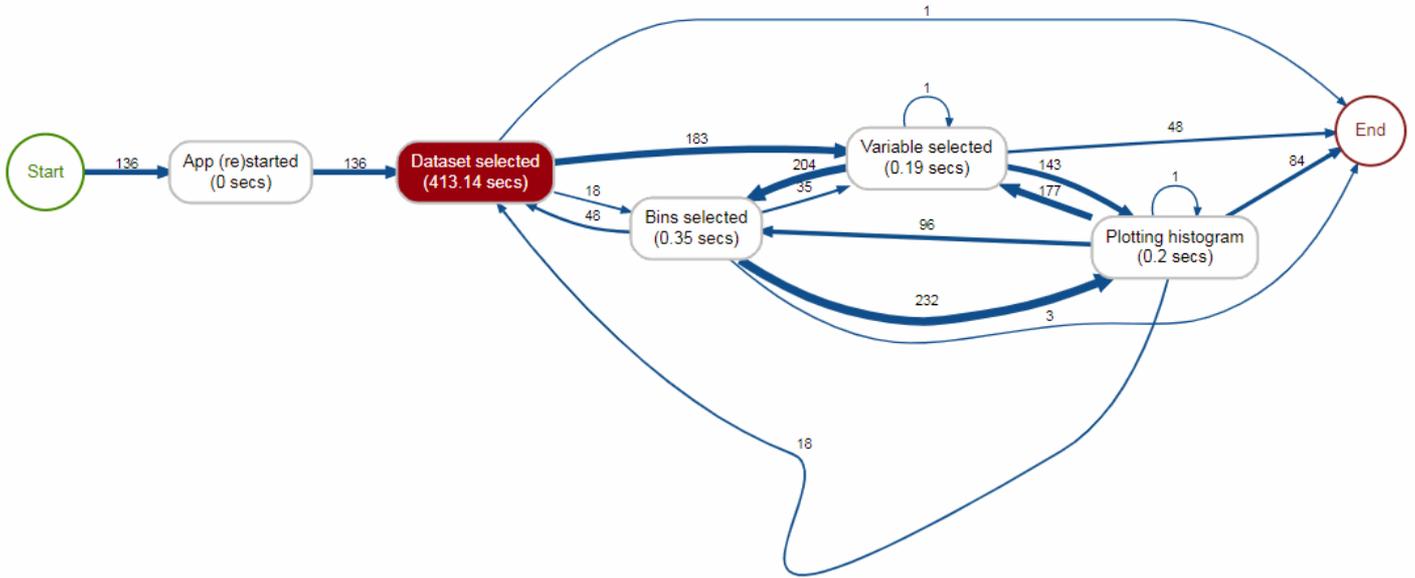

with process-mining techniques (bupaR package)

24 / 32

Process maps

- patterns and paths in end-users behaviors

Maximum time

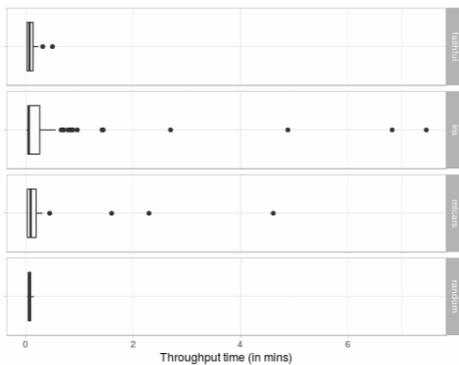

Mean time

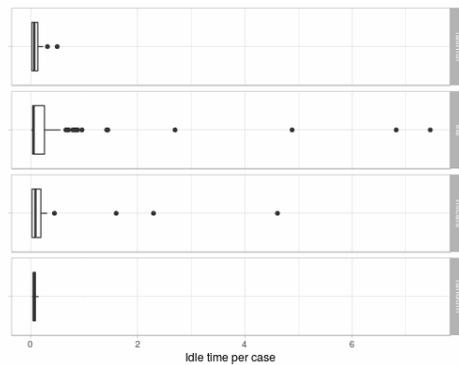

Time analysis

- throughput, idle, and processing time per dataset

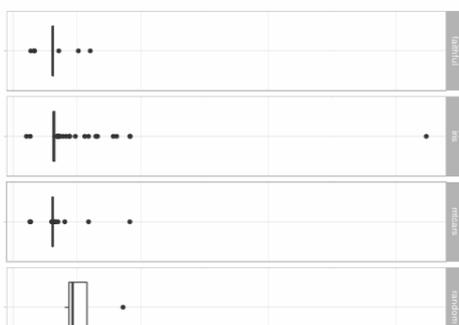

Throughput time per dataset

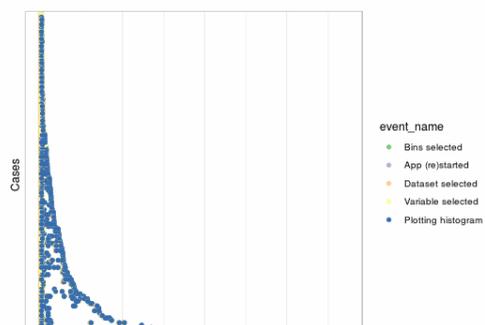

Idle time per dataset

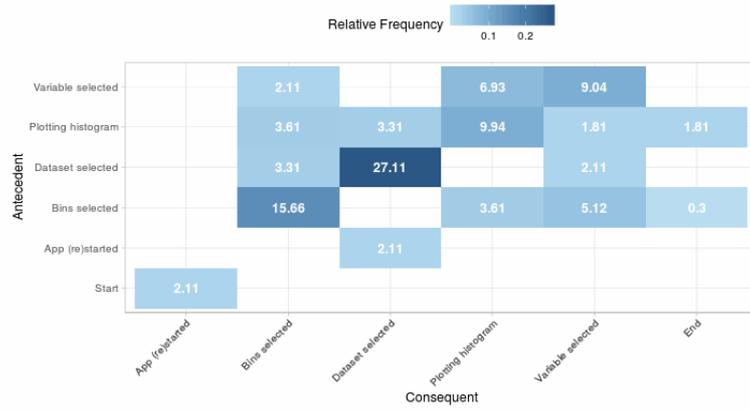

Processing time per dataset

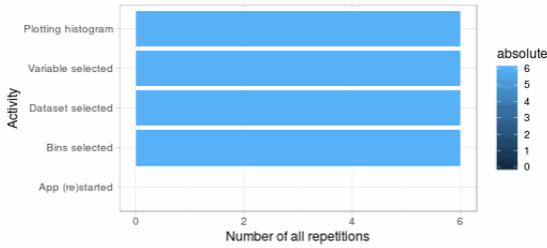

Dotted chart of cases

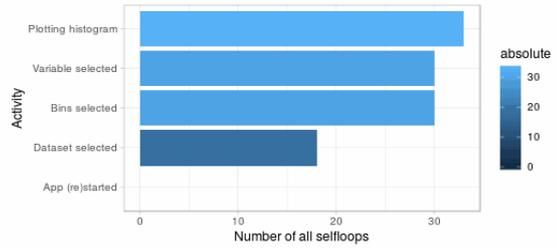

Sequence analysis

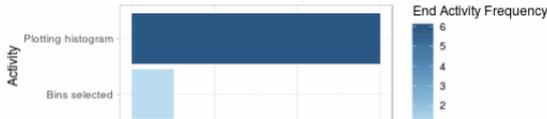

Repetitions

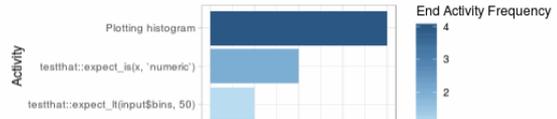

Selfloops

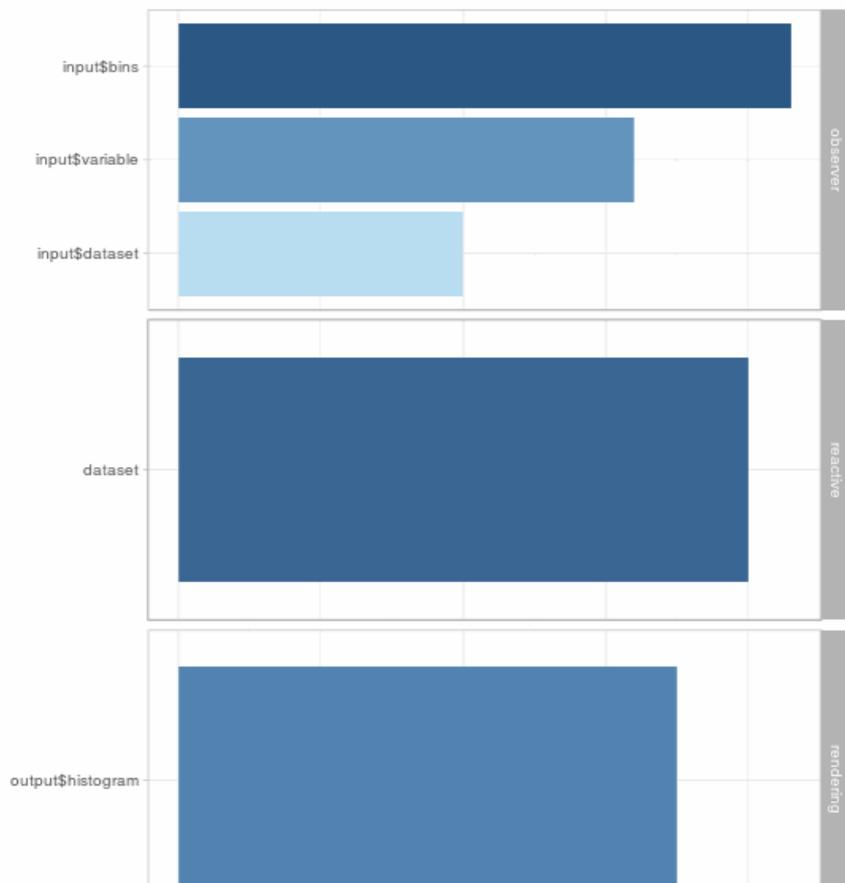

End activities (grouped)

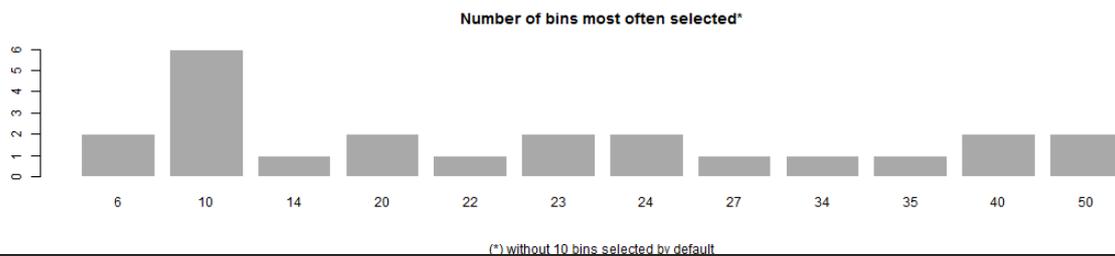

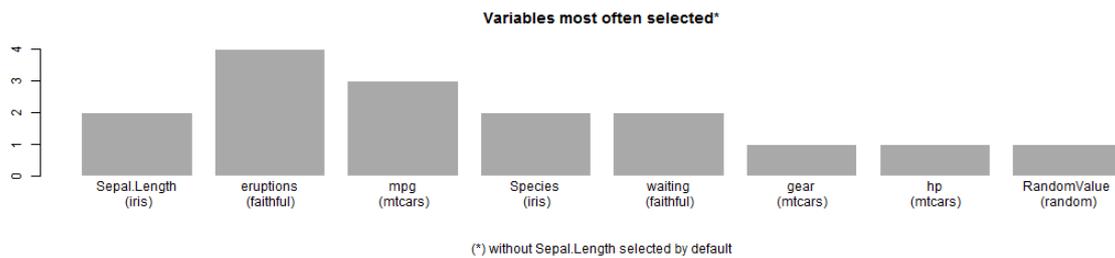

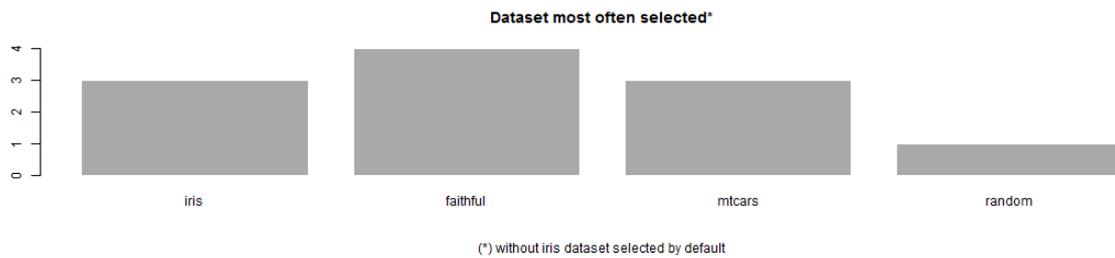

End activities (ungrouped)

Resource analysis

Top users' actions

What's next?

Roadmap

- adding catching and logging **unexpected errors**
- adding **JSON** as default serialization format for storing events (also in a file)
- improving integration with **MongoDB**
- adding ability to **show or hide** selected part of event data
- adding a method for dynamically selecting which events should be logged **where and when**
 - permanently to a database **vs.** temporarily to a console
 - during developing & debugging **vs.** in production environment
